- Greece: Crete, Athens, Kos, Kavala, Rhodes, Corfu, Thessaloniki, Santorini (Tera),
- Portugal: Faro,
- Georgia: Kutaisi,
- Bulgaria: Burgas,
- Switzerland: Zurich,
- Denmark: Copenhagen,
- Croatia: Dubrovnik, Zadar,
- Montenegro: Podgorica,
- Turkey: Antalya, Izmir

TECHNICAL INFRASTRUCTURE

In the context of attracting investments to the city, including direct foreign investments, the technical infrastructure (equipping with gas, electricity, water and sewage networks) and communication infrastructure plays an extremely important role. These are the basic elements taken into account by the investor when making a decision to locate an investment.

- Electricity: The city is well-equipped with a medium and low voltage network of the required standard.
- Gas network: The Lower Silesia Voivodship is supplied with natural gas from the national high-pressure gas pipeline system and a system of smaller local branches to the reduction and measurement stations.
- Heating network: The largest fuel combustion installations in the city of Dzierżoniów belong to the company ZEC Zakład Energetyki Ciepłej Ltd. All district heating networks are operated by the enterprise.
- The city has a separate sewage network. The sanitary sewage network is owned by the company Wodociąg i Kanalizacja in Dzierżoniów, and the rain sewage network is owned by the city. Access to the sewage system has approximately 99.9% city residents.
- New fiber-optic networks, underground and overhead cable telephone lines dominate. Wireless network technology is also dynamically developing.
